

THE FUEL GAS USED DURING THE INJECTION SEASON OF THE 2020/2021 STORAGE CYCLE

Fuel gas consumption coefficient for the 2020/2021 injection season was $C_{FG} = 1,16\%$

Coefficient have not applied to virtual reverse flow – for gas injection during the withdrawal season.

Total transmitted natural gas volume who has been applied with fuel gas consumption coefficient for injection in the Storage 2021/2022, were **13 355 303 033 kWh**

The provided fuel gas volume for 2021/2022 injection season - **154 921 513 kWh**

The actual fuel gas volume for 2020/2021 injection season - **135 669 730 kWh**

The returned gas volume to system users - **19 251 783 kWh**

(The recalculated fuel gas consumption coefficient for the 2021/2022 season is $C_{FG} = 1.015849132 \%$)

In accordance with the Rules of use of the Inčukalns Underground Gas Storage point 55 and point 56, the unused fuel gas volume will be return to each system user. The unused fuel gas will be placed into the booked capacity product with a free space, increasing the stock of natural gas. Or the system operator stores such fuel gas quantity for free until the moment, while the system user has the enough booked capacity.
